Building Strategy

01 Idea and PLanning

I searched for Ideas that might be in other countries but not as many in Jordan, after I found the Idea the support from my coaches came in where they gave me the features I should have .

02 Style and features

I started with the wireframe and mokup, it took me many tries to actually get to what I wanted I also had to choose the colors and everything in it.

03 Build Frontend

the fun part was Building and seeing my creation come to live with the frontend implementation.

04 Build Backend

here was somewhat the hard part but it was a beautiful thing to finish and look at what I was able to finish.

How will It work in Jordan

Jordanians love local

People of Jordan always like to support local business and like the new Ideas that a local might make

So much marketing

Like any fresh business we will need a big marketing campaign and woord of mouth

All businesses want more people

Who doesn't like more customers and more traffic, and that is what we aim for people to know and share their good experience and not so good for them to better them selves

Support from Orange

Last but not least, I will need all the support from Orange as it is one of the biggest companies in Jordan and Europe

How will it make money

Owners Subscription

the owner of a business will have an option to post and subscribe for us to have them on our website.

Promotion

we will allow certain promotions on the website of some businesses and packages will be available of where it will be placed and how visible.
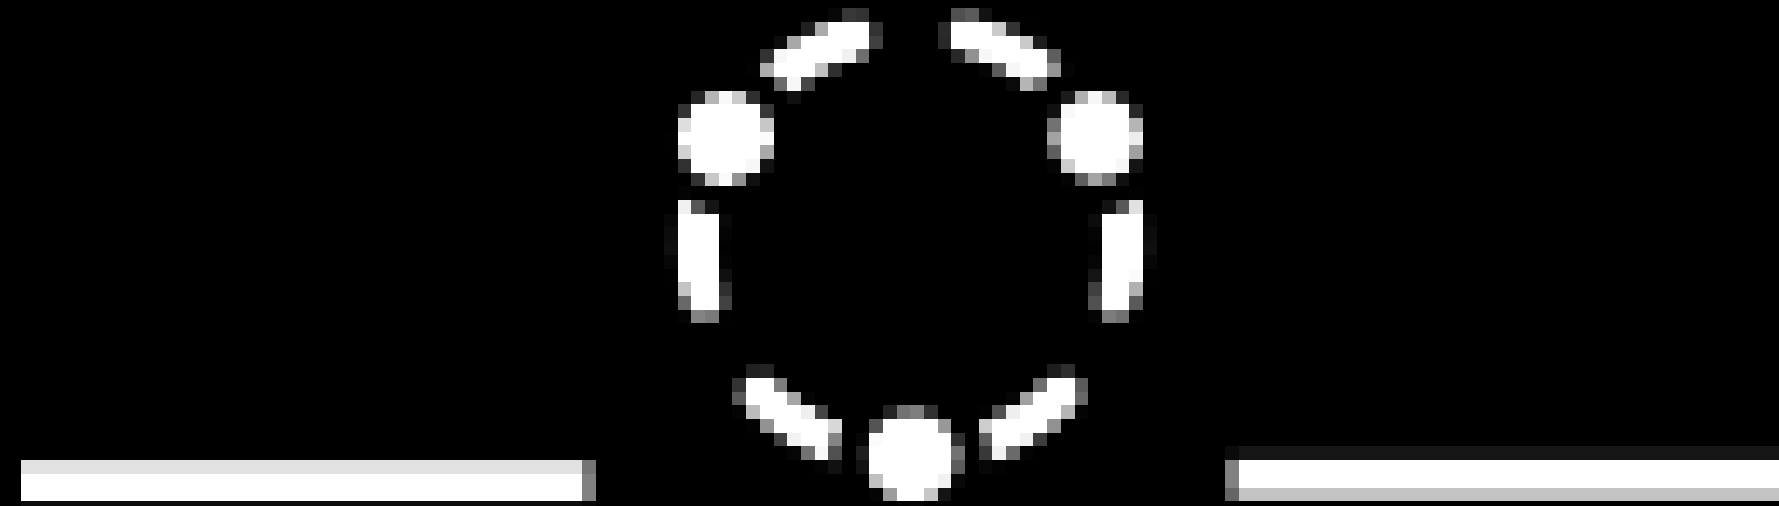

Traffic

As it is free to join as a customer that will mean we should have a great number of users with that we can post ads and more for any business dependent on traffic.

The name and logo

Everything should have a meaning
